

David Grabel CSM, CSP, SPC, AHAF
Enterprise Agile Coach, Vistaprint

Grabel Consulting Services

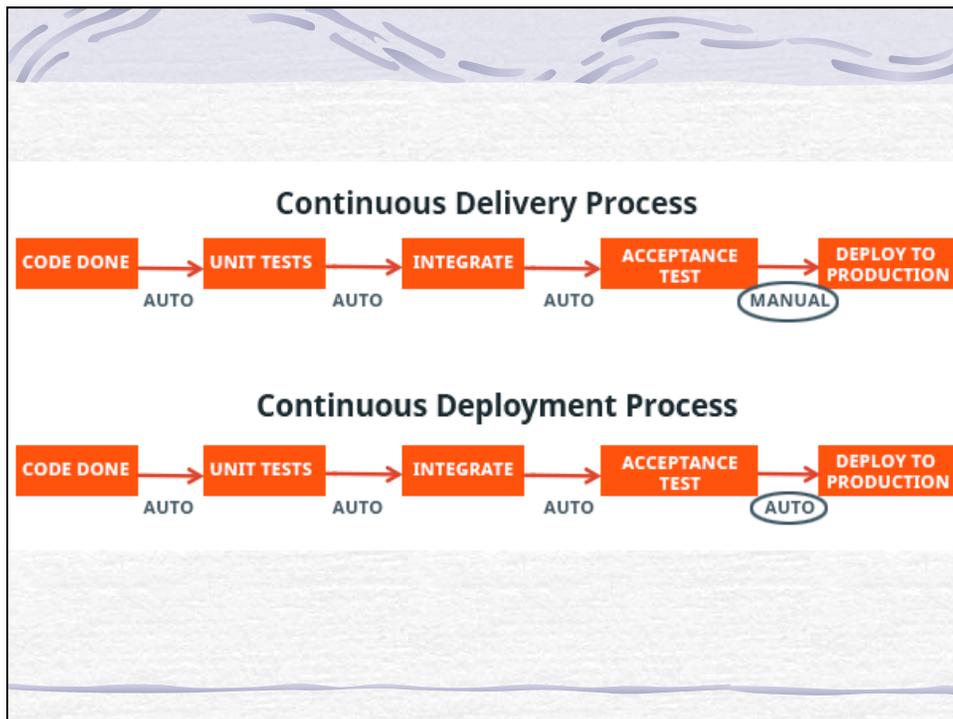

Former VP, Product Development

Continuous Integration

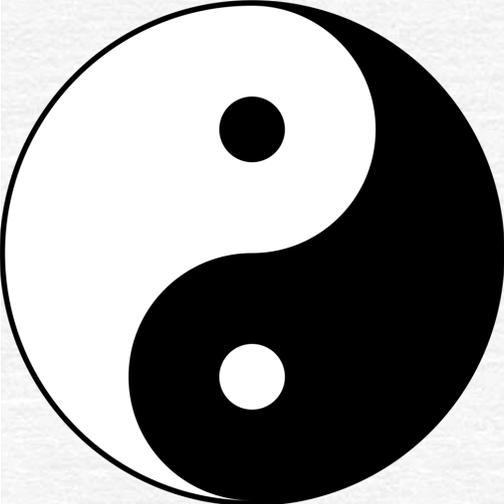

**Build on
Check-In**

Why?

- Quality enables Speed
- Speed depends on Quality
- Speed + Quality = Competitive Advantage

Why Not?

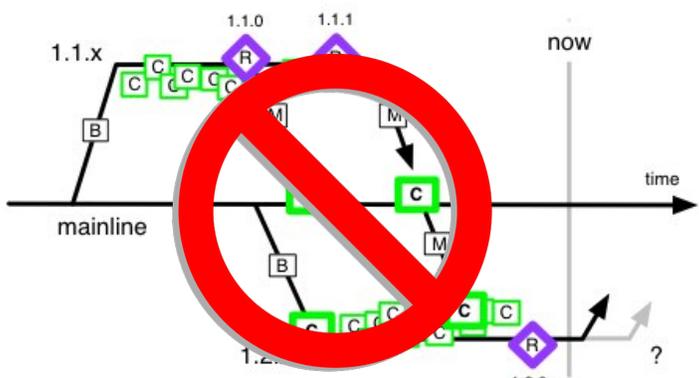

Not for everyone

Everyone should develop as if they can deploy continuously

Fosters best practices

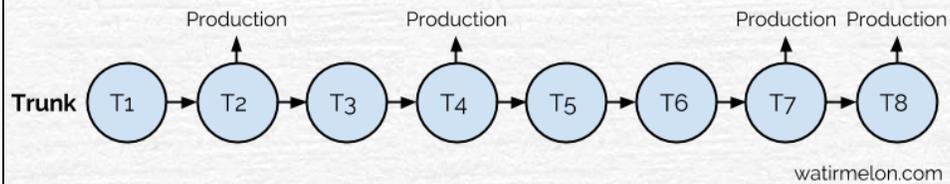

SW Engineering Practices

	build + release to prod		a branch being cut		merges
	commit (developer)		big commit as part of a merge (dev or ..)		

SW Engineering Practices

Trunk Based Development without a Release Branch

SW Engineering Practices

 GlassFish Server Open Source Edition 3.1.1

DevOps Practices

A SecDevOps Use Case

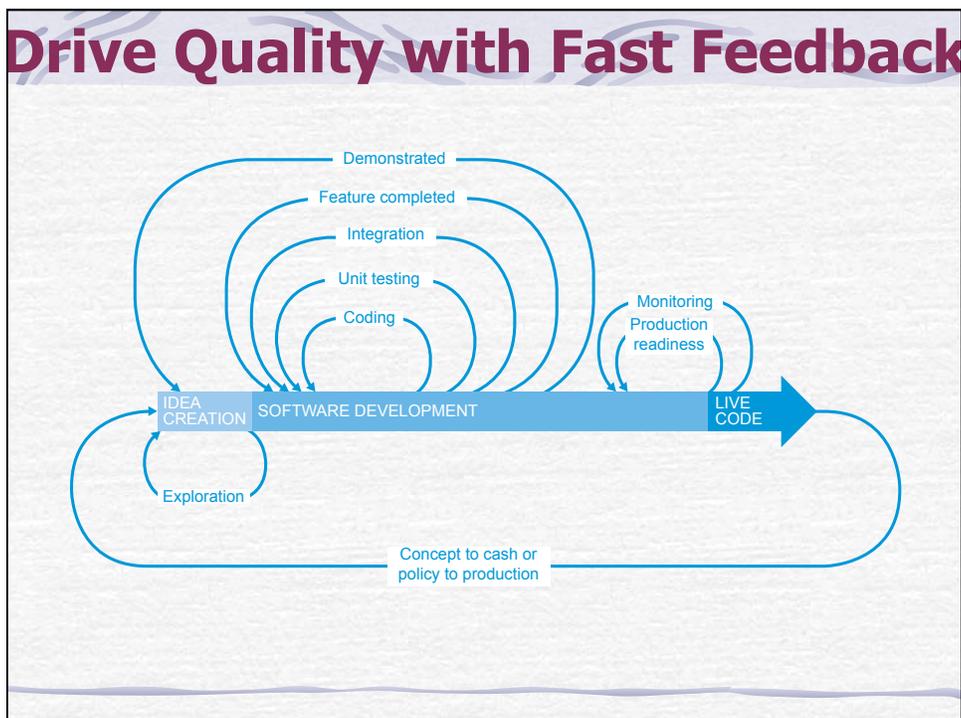

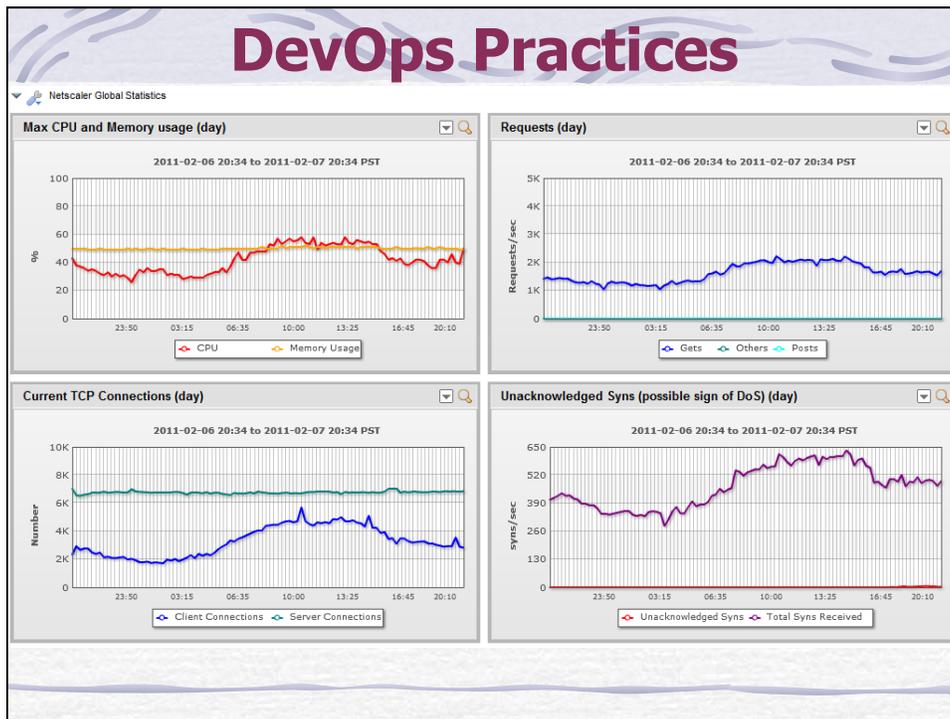

Continuous Security Testing

- Brakeman Static Analysis
- Dynamic Application Scanning
- Paid Penetration Testing Service
- Open Bug Bounty Program
- Continuous Infrastructure Scanning

All Results Loaded into Kenna via API

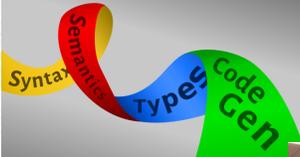

The diagram is a circular flow of seven steps: Commit Local Branch, Testing via RSpec / Brakeman / Etc., Pull Request / Code Review, Merge Master, Deploy, Feature Flag & Test, and Roll Out. Arrows indicate a clockwise cycle between these steps.

Static Analysis

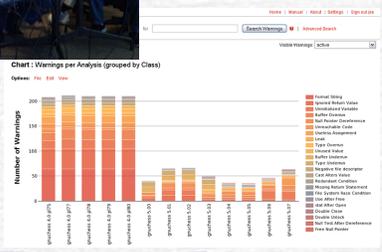

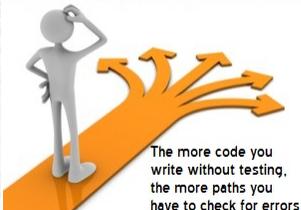

Chart : Warnings per Analysis (grouped by Class)

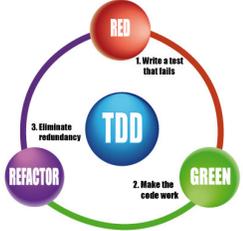

Class	Number of Warnings

Design becomes automated testing (or did I mean that in reverse)*

Keep on a straight path with proper unit testing.

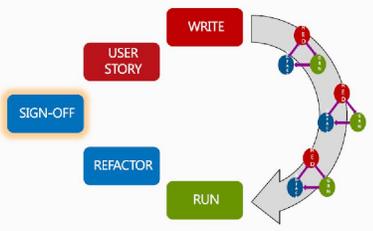

The more code you write without testing, the more paths you have to check for errors

(Acceptance Test Driven Development)

- ▶ Select User story
- ▶ Write Acceptance Test
- ▶ Implement User Story
- ▶ Run Acceptance Test
- ▶ (Refactor)
- ▶ Get Sign-Off

* Steven Sondheim - Company

Automated Functional Testing

Clarity
Quality
Productivity
Portability

Domain Specific Language

Overhead

DSL

Coded UI Tests

1) HTTP GET

2) Launches...

3) Requests next command

4) GET/POST goes through proxy

5) Request is proxied through

Perl Test

Selenium Server

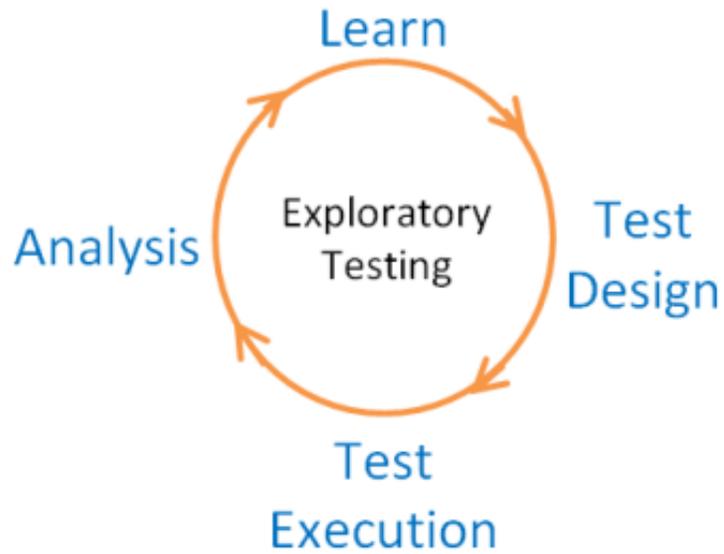

The Internets

Firefox, IE, Opera, etc.

Automated Non-Functional Testing

Manual Testing

Usability Testing

Testing Implications

- Need only one environment before production
- Test in Dev
- Don't wait for feature complete
- Don't wait for stable builds
- Definition of Done is critical
- Test key items quickly

Testing

- Test drives everything!
- Everyone is a tester
- Best Practices:
 - Product Owner
 - Engineering Team
 - SW
 - UX
 - QA
 - Production (DevOps)
 - QA is the conscience of the team
- Test everything – all the time, automatically

Discussion

- Organize in groups of 4 or 5
- List challenges to achieve Continuous Delivery or Continuous Deployment
- Identify things that would have to change in your organization to enable this. (Miracles don't count).

Implications for QA Engineers

- QA mindset is still important
- Focus on risk reduction – not perfection
- Releasing in very small chunks and monitoring in production is less risky than big complex releases
- Manual testing is a dying art
- Transition from TE to SET (Google titles)
